Here at Protenus, we are eager to help you succeed with your compliance programs! Use this information as a guide for when to contact our Support Team or when to lean on your Customer Success Manager, so you can get the help you're seeking as quickly and efficiently as possible.

Technical Support

Protenus provides telephone support and email support from 7:00 a.m. to 9:00 p.m. (Eastern Time), during normal business days (excluding government holidays). The Protenus technical support team will acknowledge problem reports promptly during such hours and provide status reports to customers appropriate to the level of the problem.

When to Contact Support

- Urgent or time sensitive requests. Our Help Desk is best suited to reply quickly if needed. Our CSMs are often in meetings with their customers the majority of the day.
- Login troubles.
- File errors or delivery questions.
- Potential bugs (i.e., if you're receiving an error message or something is not working as expected).
- Configuration requests that you don't need guidance on. (Contact your CSM to discuss strategy/configuration options.)
- Source system upgrades (i.e., if a source system with a data feed to Protenus is going through an upgrade and you need to confirm data specifications or send a test/sample file).
- Something doesn't look right (ex: missing data or analytics).
 - For Diversion customers this includes looking into trends in inaccurate incidents and questions about why a medication isn't reconciling.
- Feature questions - basic feature functionality questions.

Tips for Submitting Support Tickets

Our goal is to provide you with a response and a resolution as quickly as possible. Help us do so by including these elements in your Support ticket:

- Describe the situation in as much detail as possible.
- Provide supporting materials such as screenshots or Protenus URLs where applicable.
 - Screenshots are especially helpful when you're describing an error message or providing documentation for an inaccurate incident.
 - Include your IP address if reporting login issues.

Please be sure to obscure any PHI or PII before sending to protect patient privacy. Note that URLs featuring filters by patient name will include that patient name in the URL, but all other URLs are a safe way to direct Support to exactly where you're having the issue.

NOTE: Your CSM is notified when you enter a ticket so they can assist when/if needed.

To submit a ticket, click the **Submit a Ticket** button at the top of the page, select the issue category, and enter the details of your request.

Please provide any additional details/descriptions of your request below *

Customer Success

In addition to technical support, you will have access to a Customer Success Manager (CSM) to help you get the most out of your partnership with Protenus over the long term. This resource is designed to help understand your organization's unique objectives for partnering with Protenus and guide you to best achieving those objectives. Your CSM will discuss with your team the best meeting cadence to support your objectives and also assist your team with conducting training and providing training resources.

When to Contact Your CSM

- Strategy and goal setting.
- Best practices and recommendations (The Help Center and PANDAS Habitat are also great resources for this).
- To discuss configuration options.
- Questions about the analytics (ex: why did this case get promoted?).
- Questions about your contract and renewal info.
- Additional 1:1 training needs (For on-demand training, head to Protenus Academy).
- Questions about plug-ins, integrations, or adding Professional Services.
- Provide product feedback or ideas for enhancing the analytics.

Not sure where to go or what to do? Your CSM will point you in the right direction!
